

School Solutions

FUTUREKIDS can help you achieve a customized technology education solution by using the features you need from our School Technology Solutions. Or better yet, you can have FUTUREKIDS take care of all your needs and headaches with a Turnkey Solution.

The breadth of FUTUREKIDS success results from a unique teaching philosophy: Students of all ages learn best in an interactive, creative environment that enables them to explore, challenge and discover. Our students, regardless of the learning environment, receive hands-on instruction at the computer and are grouped into small classes to ensure a high level of personalized attention.

"At FUTUREKIDS, we have taken the technological marvel, the computer, and made it an intellectual sport allowing creativity, communication, cooperation, and personal expression. We are giving students the tools to be prepared for the 21st century."

Peter Markovitz

Founder of FUTUREKIDS

School Technology Solutions

Widespread acclaim for FUTUREKIDS captured attention from the school community, and educators asked us to support them in their quest to integrate technology into school curriculum. FUTUREKIDS launched School Technology Solutions, partnering with both public and private schools worldwide to transform the way teachers educate and how students learn.

FUTUREKIDS-trained consultants work with schools to craft cost-effective technology programs that meld the following elements:

- Technology Planning
- Hardware and Software
- Teacher Development Program
- Technology Curriculum Licensing
- Technology Integration Services
- Ongoing Support

The effectiveness of our educational programs lies in our ability to elevate and to empower teachers with:

- Comprehensive training

- Clearly defined learning objectives
- Detailed lesson plans
- Exciting and relevant projects

FUTUREKIDS' commitment to train teachers by our own instructors or those of a school's to ensure that educators are equipped to impart technology skills to students and to infuse technology into their own classrooms. Our commitment is reflected in our comprehensive training programs, the ongoing support we provide and a familiar teacher tool: curriculum.

This combination of training, tools and support enables educators to teach students highly developed computer skills while also teaching them to work in a team, to think creatively and analytically, to solve problems and to communicate effectively. The end result: students who are truly prepared and equipped to be productive citizens of the world and schools that have achieved a new level of educational excellence.

Turnkey Solutions

Implementing a comprehensive technology program is a complex and, at times, is a daunting task. FUTUREKIDS simplifies this task by providing schools with cost-effective turnkey technology solutions that enable schools to offer the highest quality technology education available--without the curriculum and professional development costs and maintenance headaches associated with technology programs.

Curriculum Licensing

As a result of the demand for comprehensive technology programs in education, FUTUREKIDS has developed School Technology Solutions (STS) for schools throughout the world. FUTUREKIDS' STS is a cost-effective solution for technology programs that addresses the needs of technology instruction within schools. Whether a school has an existing lab, computers in the classrooms or is contemplating its first technology-related purchase, FUTUREKIDS will assess its needs and develop a unique program to fulfill any requirements.
